

Running EDWinXP in user mode windows accounts

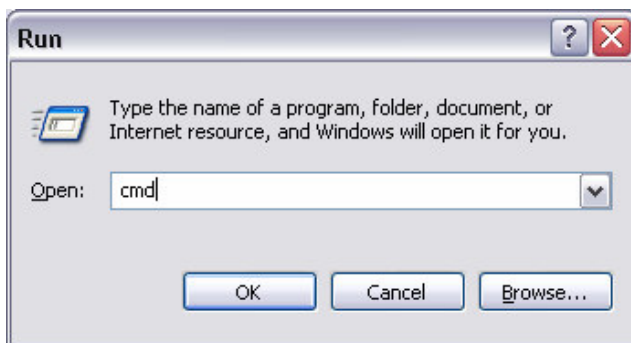

This problem occurs when your file system in system drive "say C:" is NTFS. NTFS is high secure file system which blocks the accessing of certain system files by programs. This Problem is not specific to EDWinXP. This can happen with many programs.

This can be overcome by the following commands

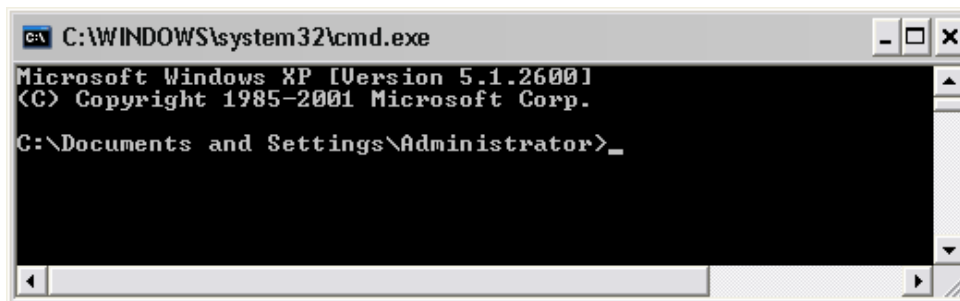

1. How to run this command?

This command can be run only in Administrator mode.

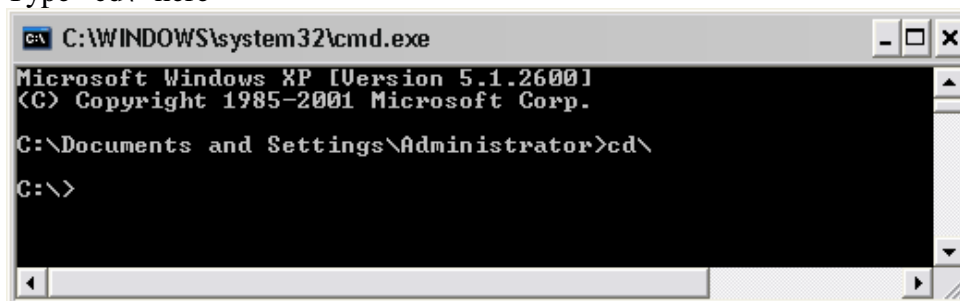

From start->run type "cmd"

This shows the command window

Type "cd\" here

Type the following command here

```
CACLS %systemroot%\System32\*.dll /E /G BUILTIN\Users:R
```

Press enter now

```
CACLS %systemroot%\System32\*.ocx /E /G BUILTIN\Users:R
```

Press enter now

Note: You can copy and paste the command rather than typing it.

Now run EDWinXP.

This command gives access to the required system dll for the users too and now user will also be able to run programs which requires access to system dlls
